Subject: Gravel Roads

Roger and Paul:

I spoke to Dylan and he hasn't had a chance to get together a detail, but we discussed the following:

- 1) Two twelve foot HMA lanes.
- 2) Mixture of curb & gutter and open-ditch (3' paved, 3' gravel). Will probably install more c & g to avoid ditching and further impacts to trees.
- 3) Gravel to paved roads are typically designed for unposted (55 MPH) conditions. Curves and sight lines may reduce speed design.
- 4) They will try to maintain a 12' clear zone from edge of lane line.
