

FormFab LLC

Company History

July 2007

FormFab was established in 1998 to supply the Automotive Tubing Industry with inspection fixtures that inspect tube contours. It was started in the Founders garage after a career in the tubing industry that spanned 20 years and involved everything from building inspection fixtures to Engineering & Product Development Management for a large Tier One Automotive Tubing Supplier.

Approximately 1 year later FormFab expanded its capabilities to include the production of developmental prototypes to the Automotive Tubing Industry. It moved into a 3400 sq.ft. industrial unit in Auburn Hills and over a 3 year period created 6 new jobs.

In 2003 the company moved to a new 9000 sq.ft. facility located in Auburn Hills, in order to continue its growth. The company created another 8 new jobs.

The company continues to add to their capabilities, designing and building numerous styles of inspection fixtures and supporting a multitude of customers with prototypes and other premium development services in their times of need.

The company has been successful with the business, as is evidenced by the ability to grow at a rate of 20% a year for the past 4 years.
