Thanks, Keith. FYI, we spoke with RCOC and they will be requiring a HAWK signal to cross Adams Road. Generally, the request for a HAWK signal requires additional traffic background data and they said that is enough to justify the HAWK and we will not need any further studies. We also were able to get some design requirements for this area while we were on the call and figure service connection, etc with RCOC. At this time we are going to put together a cost estimate for review at our Thursday meeting and talk next steps if the City would like to proceed. Overall, save money but time as well as the lead time for mast arms is extremely long (5+ months). Let us know if you have any questions or need anything in the meantime. Thanks!
