RE: 2006 International Fire Code

Todd M. Gary, Ext 2702

---

I have been working with John Staran and we have prepared revisions to city ordinance chapter 58 to adopt the 2006 International Fire Code.

We are proposing to change from the current Uniform Fire Code to the International Fire Code.

The International Fire Code is a companion code to our current Building Code; by adopting the International Fire Code we will eliminate any conflicts and make it easier for the building and fire departments to work together.

Most of the changes are to the numbering sequence to allow the numbers to coincide with the new code.

Several sections have been deleted and these are now addressed in the code and no longer need to be in the ordinance.

Please see the attached list for a more detailed list of the changes.

Please advise me if the changes are acceptable so I can proceed with placing this on the city council agenda.

If you have any questions please contact me.
