Detailed Project Description <i>(include description of projects &amp; benefits)</i>				
<p>This project will include remediation of contaminated soils and construction of a new residential apartment complex with up to 400 units, amenities, and with onsite surface parking. This Project will ultimately put an underutilized property into productive use and return it to the City's tax rolls.</p>				
Describe anticipated schedule, including critical dates				
<p>It is currently anticipated that redevelopment will begin in early 2018 and be completed in 2021.</p>				
Why does the project need incentives? Are there excess costs or market conditions that make investment difficult?				
<p>The project is the redevelopment of the former Christensen Dump and is heavily burdened by significant environmental conditions. Because of both heavy contamination and geotechnical issues from dumping, the property has been unable to attract development or use since the 1960s. The area is attractive for new construction, but the cleanup + redevelopment costs associated with site conditions are so high that all previous redevelopment efforts have been stymied.</p>				
Describe the status of permits & applications				
<p>The developer is in the process of finalizing site plans for the project with the city.</p>				
Describe basis for Brownfield designation under Part 201				
<p>The subject property is considered "Eligible Property" as defined by Act 381, Section 2 because: (a) the subject property was previously utilized as a commercial property; and (b) each of the parcels comprised by the subject property has been determined to be a "facility".</p>
