Subject: Rochester Road (M-150) north of Hamlin

Derek,

Regarding the pavement history of M-150, this is what our available old plans show:

1920 - Originally constructed (18' wide concrete)
1941 - Widened 2' on each side and overlaid with HMA surface (22' wide composite section)
1950 - HMA overlay (22' wide composite section)
1971 - HMA overlay (22' wide composite section)
1974 - Reconstructed concrete section (60' wide concrete) At residence in question, all ROW was acquired on the west side of the original road and nothing taken at residence.

I hope this helps. Please let me know if you have any questions or require additional info.

Tom
