Like a Speed Trailer in a Box

The New Stalker SpeedBoard is a self contained, water resistant, radar and speed sign designed to measure and display the speed of vehicles. The SpeedBoard's large 14 inch, high intensity LED digits are visible from 1000 feet away, so drivers can see their speed far enough away so they have plenty of time to slow down.

Mount Them Almost Anywhere

SpeedBoards are perfect for placing on school zone or speed limit signs, on top of a vehicle's trunk or roof, and even on the back of a slow moving D.O.T. or construction vehicle.

Slow Drivers Down Where it Counts

A Stalker SpeedBoard will significantly reduce speeds in school zones, high accident locations, and road construction areas. It's a great way to respond to

community concerns and achieve a dramatic improvement of voluntary speed compliance in critical speed zones.

Features

- High Intensity "14 LED Digits
- Built In Direction Sensing Radar
- Adjustable Violator Alert
- Adjustable Sensitivity
- Adjustable Max. Speed Cutoff
- Weather Resistant Design
- Auto Dimming LEDs
- Rugged Aluminum Construction
- Retro Reflective Lettering
- Flexible Mounting Hardware
- IACP Approved Radar
- 1 Year Warranty

Options

- Violator Strobe Light
- Internal AC Power Supply
- Available in MUTCD Compliant White
- ELTEC Operational Timer
- Self Powering Solar System (Sold Separately Through ELTEC)

The Radar is Built-In

SpeedBoards come with either the high performance Stalker Dual radar, or the direction sensing Stalker DSR radar mounted inside.

Sophisticated Violator Warnings

SpeedBoards can be configured to alert drivers who are exceeding a preset speed by flashing the large

LED digits. The optional strobe light will flash at violators, drawing even greater attention to the SpeedBoard, to achieve even greater speed compliance.

**Locking Security Access Door**

The front panel is a hinged door that opens to provide easy access to the controls. The door is secured by a rugged, tamper resistant lock that prevents any unauthorized access.

Large 14 Inch High Intensity LED Digits

The large, high intensity LED digits can be read clearly at about 1000 feet away. A light detector senses the exterior light and automatically dims the LEDs for dusk and nighttime operation.
