

Roger: There is no such certification that I am aware of. The Transportation Asset Management Council has reviewed a number of software programs and found all of them to be acceptable. They include:

RoadSoft - Michigan Tech
MicroPaver - Corps of Engineers
Stantec
AgileAssets
Cartegraph
Hansen
Deighton

Each of these companies has software that can be used to run an asset management program. They also have web pages describing what they have available. Each offers different things and depending on what you want to do will really determine which is the best fit for your community. Also, SEMCOG is going to be testing a program called AssetManagerNT. You might want to talk with them.

The Rochester Hills City Council is considering the implementation of an asset management software program and the question was raised as to whether there exists a certification for the various types of programs available. Are you aware of any certification, best management practices or guidelines for the selection of an asset management software program?

Thanks

Roger Rouse, Director of Public Services
