Total Cost All Three Years			\$32,066.45			\$37,176.50			\$64,604.95
Will your firm be willing to perform testing of repaired ground & aerial ladder equipment other than annual schedule testing? If yes, provide pricing:	Yes			Yes			Yes		
Non-annual ground ladder testing- per foot									
2025	\$4.50			\$3.00			\$2.20		
2026	\$4.75			\$3.00			\$2.20		
2027	\$5.00			\$3.25			\$2.25		
Non-annual aerial ladder testing									
2025	\$1,000.00			\$1,750.00			\$9.25		
2026	\$1,100.00			\$1,750.00			\$9.30		
2027	\$1,200.00			\$1,750.00			\$9.35		
Did you include a completed W-9?	No			Yes			Yes		
Meet the insurance requirements?	Yes			Yes			Yes		
Describe your ability to perform repairs and/or maintenance. Identify any subcontractors.	NHTS is a third party inspection company that provides unbiased inspections. Therefore, NHTS does not repair ladders.			If a ladder is determined it can be repaired, they can make certain repairs; such as, rungs, halyards, caps, foot stops, locking devices.			They do not perform any repairs or maintenance, only testing.		
State warranty work/guarantees as it applies to parts, labor and/or installation.	See above			120 days			N/A		
Other items not addressed.	left blank			none			N/A		
Show expertise in areas of responsibility by providing a minimum of three (3) site references	Provided			Provided			Provided		
Describe the method and equipment utilized to perform ground and aerial ladder testing.	Ultrasonic inspections of accessible bolts and pins, magnetic particle inspection of critical suspect steel welds, liquid penetrant inspection of critical suspect aluminum welds.			Crews are trained and operate using the methods as described in the current editions of NFPA 1911 & 1932. They conduct testing using special proprietary equipment.			Ground ladder - engine hoist, 500 pound aluminum box, measure, put weight on ladder remove and measure. Ground ladder pull down on ladder with winch, both ways are compliant with NFPA 1932.		
Outline the method to be used to identify and record ground and aerial ladder test records.	Proprietary software to track all ground letters and aerial inspections.			Each ladder is physically and visually examined. The documentation follows the methods as put forth in NFPA 1932 and 1911, of the type of testing being completed. If a failure is observed it is evaluated for repair. If repairs are manageable, an estimate would be made and permission sought from the LEA. If no repairs can fix the failure the ladder would be tagged out of service.			Both are computer generated reports which will be sent in pdf.
